Lyris Dsilva

Binghamton, NY
+1 607-296-8910 dsilvalyris@gmail.com linkedin.com/in/lyrisdsilva github.com/lyrisdsilva

Summary

Computer Science graduate student and software developer with internship experience building backend services and REST APIs in Java, Python, and Node.js, responsive web applications in React.js, and data pipelines with optimized SQL on PostgreSQL.

Education

Binghamton University – *Master of Science, Computer Science* *Aug 2025 – Present*

St Francis Institute of Technology – *Bachelor of Engineering, Computer Engineering* *Aug 2022 – May 2025*

Skills

Languages: Java, Python, JavaScript, C++, C#, SQL, HTML, CSS, JSON
Frontend: React.js, Angular, Tailwind CSS, Bootstrap, SCSS, jQuery, Webpack, Figma, Responsive Design
Backend & APIs: Spring Boot, Django, Node.js, Express.js, REST APIs, JDBC, OAuth, WebSockets, MVC
Data & Databases: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Snowflake, ETL pipelines, query optimization, indexing, data modeling
Tools & Practices: Git, GitHub, Linux, Google Cloud (GCP), Postman, Selenium, Google Lighthouse, Jira, CI/CD, Agile/Scrum

Experience

IpserLab Fort Worth, TX (Remote)
Software Developer Intern *Jul 2026 – Present*

- Design backend services and REST APIs in Java (JDBC) that read, transform, and serve data to production features
- Write and optimize complex multi-table PostgreSQL queries and schemas, speeding up slow queries with indexing and restructured joins
- Build Java (JDBC) ETL pipelines and design data models that keep data consistent across multiple tables and production features
- Validate data and troubleshoot issues through testing, code reviews, and Git workflows in Agile sprints, tracing anomalies to their root cause

Prodigy InfoTech Mumbai, IN
Full-Stack Web Developer Intern *Jun 2024 – Jul 2024*

- Built responsive full-stack CRUD applications, including an employee management system, e-commerce platform, and real-time chat service, using React.js, Node.js, Express.js, MongoDB, and WebSockets
- Cut API response times by up to 40% by profiling backend logic and API integrations and fixing the bottlenecks
- Implemented secure authentication and role-based access control (RBAC) to protect user data and application integrity
- Converted feature requirements into working code, then tested, debugged, and documented implementation details

WebWorks Solution Mumbai, IN
Web Developer Intern *Aug 2021 – Sep 2021*

- Developed and deployed responsive web pages with HTML, CSS, JavaScript, and Bootstrap, improving Google Lighthouse mobile usability scores by 40%
- Designed SQL-backed workflows for form submissions and authentication, reducing backend query time by 25%
- Improved layouts, navigation flows, and form interactions, and troubleshot root causes of UI and integration issues

Projects

Web3 Talent Chain | *React.js, Solidity, Web3.js, MetaMask*

- Built a decentralized talent marketplace with MetaMask authentication for job posting, task bidding, and crypto rewards
- Integrated Solidity smart contracts on an Ethereum testnet for automated escrow, milestone-based payments, and on-chain reputation

MEDEASE | *Full-Stack Web Application*

- Built a healthcare portal for doctor-patient scheduling and messaging, backed by a database of doctors, patients, and appointments
- Improved booking workflows and added disease prediction and intelligent search, contributing to a 45% increase in bookings

E-Health Care Platform | *Python, Django, SQL, Machine Learning*

- Built a Django web app with REST APIs that serves machine learning predictions for early screening of heart disease, diabetes, and pneumonia
- Designed the SQL patient-record data model and a dual-path health-check workflow, cutting manual diagnostic steps by 70%

CrewConnect | *Full-Stack Web Application*

- Developed a mobile-first maritime crew management system with profiles, leave/WFH requests, document sharing, and notices
- Built REST APIs and real-time messaging and notifications to support crew communication and meeting scheduling
